Footnotes:

*) The determined measurement uncertainty (M.U.) is always given in the same unit as the specified result.

***) ND = Not Detected: the measured value was below the detection limit of 0,01 % respectively 100 mg/kg.

For the calculations of the equivalence sums, the respective acid forms were multiplied by the factor of 0.877 and 0.878, respectively, to infer the equivalent amount of the neutral forms.
